

Keep File Sharing Efficient in Virtual Environments

ShareFile + XenApp + XenDesktop

The simple way to file, sync and share content across physical and virtual endpoints and on-prem and cloud storage locations.

Extend Virtualization to Content

Citrix ShareFile is the only Content Collaboration Platform solution optimized for the unique requirements of virtual desktops.

- Fully supported for Citrix XenApp and XenDesktop environments
- Access and share content as a mapped Windows drive
- Keep users productive in the native Windows experience

Increase Productivity & Efficiency

Reduce storage costs and increase the performance of file syncing in virtualized environments with ShareFile Drive Mapper.

- Present a virtual drive to users, reducing synchronization needs
- Define cache size, drive letter, and other configurable options
- Auto-update reduces administrative burden of updating virtual clients

Leverage existing Investments

Provide on-demand access to remote files and folders regardless of how much local storage is on the device.

- Equalize the experience between physical and virtual desktops
- Store files on prem, in the cloud, or a combination of both
- Embrace mobility and Bring Your Own Device initiatives
